Rajkishor Maharana

Fullstack Developer

Bengaluru, IN | +91)7683922389 | mrajkishor31@gmail.com

Skills

Front-end

Web and Mobile

React JS, Redux, React Native, Angular 2+, HTML, CSS, JavaScript, TypeScript, npm, Ionic, MFE (Micro Front-end) frameworks, Next.js

Back-end

Express JS, PostgreSQL, MongoDB, NestJS, Spring Boot, REST, GraphQL, Microservices, Spring WebFlux, Spring MVC, J2EE, Restful APIs, ER Model, Relational Model

Testing

TDD/BDD

Jest, Enzyme, HTTL, React Test Utils, React Test Renderer, JUnit

Tools

Github/Bitbucket, Postman, Jira, VScode

SDLC

Agile (SCRUM), Confluence, Jira, Git, TDD, BRD, SRS, GoF Design Patterns, UML, System design

Cloud & DevOps

Docker, Jenkins, Azure DevOps, AWS

Languages

JavaScript

SQL

Java

Profiles

mrajkishor331

mrajkishor

Summary

Full Stack Developer with 6 years of experience in designing, developing and deploying web and mobile applications. Proficient in front-end technologies such as React and, as well as back-end technologies including Node.js, Express, and Spring. Expert in TDD/DDD. Skilled in database management with Relational Databases and NoSQL. Experienced in cloud platforms such as AWS and Azure, as well as on-premises infrastructure. Adept at working in agile environments, collaborating with cross-functional teams, and delivering high-quality software solutions. Passionate about learning new technologies and improving existing development processes.

Experience

Cognizant — **11th jul 2022 to Present**

Associate - Full stack developer — Hyderabad, IN

Project 7:

Project name: ACSS (Automated Customer Support System)

Client: Verizon

Duration: 20th Dec 2023 to Present

Description: ACSS is the Automated Customer Support System, where it involves in solving the problems for the tele caller customer care representatives starts from receiving customer's call till his issue/query addressed like changing plan, technical issues, mobile monthly bill related information etc.

Role: Full stack engineer

Team size: 50+

Technology: React, Redux toolkit, Redux (Saga, Thunk, Persist), Spring (Boot, WebFlux, Cloud, AOP, Data JPA) AWS, GraphQL, Oracle Database

Tools: VS Code, GitLab, Intelij, Eclipse

Responsibility

- Responsible for the Migration of backend logic from legacy (ESB - Enterprise Service Bus) architecture to DDD architecture.
- Used Spring WebFlux and Spring boot for the development of API Gateway, Domain and aggregate microservices. Used Junit for writing unit test cases.
- Worked on the migration of legacy monolithic frontend to Micro Frontends using MFE Framework. Used React to develop MFEs for the Microservices. Used Jest and RTL for writing test cases using TDD approach.
- Collaborated with Agile team on a daily basis for scrum calls, retrospectives analysis, backlog grooming, sprint planning, sprint progress, SME reviews etc.

Project 6:

Project name: Teach Cambridge

Client: Cambridge University

Duration: 16th Jun 2023 to 15th Dec 2023

Description: Teach Cambridge is a secure website that provides users with access to resources and support for the subjects they teach. This includes secure materials, such as set assignments, examiners' reports, and exemplars, as well as online, on-demand training and many other teaching resources.

Role: Full stack developer

Team size: 13

Technology: React, Redux, Axios, React router, Jest, Enzyme, Material UI, Webpack, Babel, RTL, AWS, Azure DevOps, Terraform

Tools: VS Code, Bitbucket, Git, Browser Dev tools

Responsibility

- Developed UI components using React and JavaScript design patterns such as HOC, hooks, render props, observer pattern etc with TDD/BDD approach.
- Deliberately focused on the code quality, code reusability, maximum code coverage and the business alignment of the development modules.
- Applied advanced React state management and memoization concepts in the development.
- Developed AWS Lambda function in Java using Spring Functions. Used JUnit for writing test cases.
- Looked after the setup and configuration of AWS serverless backend with API Gateway, Amplify, AppSync, DynamoDB, SQS, S3, CloudWatch and Lambda.
- For deployment used Azure DevOps pipelines.
- Worked with the team for sprint plannings, deliverables estimations, requirements gathering and analysis, backlog grooming, feature/product release planning etc.

Project 5:

Project name: Complaints Self Servicing Portal (S3P)

Client: American Express

Duration: Aug 2022 to Apr 2023

Description: The S3P portal tool allows users to conduct searches of ICARE complaints data using specific query words of topics. The tool allows users to search all complaints for a given time period. The portal is comprised of 4 key sections i.e., Mandatory search parameters, query search box, filters and attributes.

Role: Full stack developer

Team size: 11

Technology: React JS, Jest, Enzyme, RTL, Redux, Elasticsearch, Spring Boot, HiveQL, PostgreSQL, MFE framework

Tools: VS Code, Git, Jenkins, Docker, Chrome Dev tools, Maven, Eclipse

Responsibility

- Understanding of OneApp MFE framework and development of frontend modules, state management configurations with Redux, data fetching with Ignatu-RPC and REST etc.
- Used React JS, Redux and Node JS to develop user-friendly responsive web applications.
- Created analytics dashboard modules using HighCharts JS and Amex oneDLS components for the internal web portal.
- Developed a reusable, pluggable, loosely coupled table module with search, sort, filter and pagination features along with Analytics dashboards using the OneApp framework.
- Used HiveQL in cronjob to query big data in batches from the Hadoop data mart and ingesting to PostgreSQL database for data normalization.
- Developed services to extract and transform huge volume of data from PostgreSQL database using Spring Boot and Spring data JPA. Created RESTful endpoints for the React Application to populate these data in tables and analytics dashboard.
- Debugging, code reviewing and resolving issues with the existing application to ensure optimal performance and reliability.
- Participating in sprint planning, backlog grooming and retrospective analysis.
- Collaborating with the developers, PO, scrum master and cross functional teams.
- Followed Test Driven Development approach with 100% unit test case coverage. Used Jest, Enzyme and RTL for writing test case coverage.
- Used Git for version control, Docker for containerization of the backend microservices and the React micro frontend components and Jenkins as CI/CD pipeline.

Capgemini — **15th June 2018 to 11th July 2022**

Associate Consultant - Full stack developer — Airoli, Navi Mumbai, IN

Project 4:

Project name: Solution Finder

Clients: Michelin Group, Edwards Life sciences, John Lewis & Partner, RMG, CCEP

Duration: May 2021 to Jun 2022

Description: : Solution Finder is a web-based application assisting the resolver groups to quickly find solutions for the problem in hand .Users submit a query which is analyzed against the current repository for matching solutions. The repository is scanned for Incident, Problem management tickets and Knowledge objects for providing the optimal solution. The tool generates a ranked output which helps the user to apply the correct solution to the problem. Solution Finder can also be accessed through a chrome plugin which enables the user to directly search from within the ticketing tools.

Role: Full stack developer

Team size: 13

Technology: Spring (java), Node JS (Express), React JS, HTML, CSS, Java 11, ITSM Tool/Share point, Apache Solr, Chrome extension API

Tools: VS Code, Git, Browser Dev tools, Maven

Responsibility

- Responsible for development of RESTful web services and Adapters using Nodejs for I/O intensive tasks in the microservice based architecture.
- Developed batch processing adapters to routinely fetch data from Servicenow incidents, knowledgebase, and SharePoint documents and index newly fetched data into Apache Solr using Cronjob.
- Followed Test Driven Development approach and SCRUM-Agile methodology.
- Responsible for understanding the code base written in node JS (Express JS) ecosystem and converting the same functionalities into a Java (Spring) ecosystem.
- Created Spring services with RESTful APIs populating data with Hive. Developed logic for normalizing huge data sets and wrote unit tests with more than 80% coverage using JUnit.
- Developed Responsive UI with React JS/React Native, Bootstrap and React native paper.
- Responsible for maintenance of software, fixing software vulnerabilities and on-premise feature add-on for engagements.
- Regular sync up with agile model, stand ups, Jira board, Confluence, deliverables, unit /integration testing and defects fixing.
- Developed a chrome extension to monitor web page console logs and HAR logs using Chrome extension API, jQuery, bootstrap, jspdf.
- Developed a chrome extension API from scratch and demoed as POC. The plugin helped in capturing web application performance issues from console logs, HAR logs, capture screenshots and edit as an issue or incident. The incident is exported as PDF and docx.
- Created a common PWA landing page with SSO integration to centralize SPAs from different engagements. Created a role and user management-based plug-gable React Page.

Project 3:

Product name: App Analytics

Duration: Feb 2020 to Apr 2021

Description: App Analytics is a web portal to analyse the client software to track the application development metrics based on the request/complaints data raised from various demographic distributions. The portal is used to analyse their application performance and illustrates the insights of their applications which are under development and helps stakeholders in identifying the weak areas.

Role: Full stack developer

Customer name: Airbus

Team size: 6

Technology: React JS, HTML, SCSS, webpack, babel, PostgreSQL, Kafka, Express JS (NodeJS), MongoDB

Tools: Git, VS Code, Azure DevOps, Azure VM

Responsibility

- Converted the UX prototype into a responsive website and mobile application. Developed from scratch using Bootstrap, React JS, React Native, Redux, HTML and SCSS. Used Jest with Enzyme for writing unit tests.
- Responsible for integration of SSO authentication.
- Developed RESTful APIs in Express JS using Mongoose with MongoDB.
- Wrote unit test cases for the NodeJS backend using Mocha and Chai with 100% code coverage.
- Used Kafka in the frontend for user behavior tracking and producing real time analytics.
- Responsible for adding new features into the full stack application and fixing software defectives effectively.
- Regular sync up with agile process, deliverables, unit /integration testing and defects fixing.

Project 2:

Project name: Maturity Assessment Portal

Client: Heathrow

Duration: : Apr 2019 to Jan 2020

Description: MAP is an assessment platform. MAP is a solution to identify the automation maturity. MAP helps to assess the scope for enhancement of the business unit or account. The MAP Application is a Spring boot and React based application.

Role: Full stack developer

Team size: 13

Technology: Angular 2+, Highcharts JS, Bootstrap, jQuery, immutable.js, Lodash, Mocha, chai, Jasmine, Spring Microservices, JPA.

Tools: Visual Studio Code, Tortoise GIT, Azure DevOps

Responsibility

- Developed microservice RESTful APIs with PostgreSQL database using Spring boot and Spring data JPA.
- Converted UX prototypes/wireframes into frontend web applications from scratch using Angular 2+ and used jasmine for writing unit tests.
- Syncing up with Agile process, deliverables, unit/integration testing and defects fixing.
- Used Azure DevOps pipeline for Code commits, version control, branching and deployment of releases.
- Created analytics dashboard with Highcharts JS.
- Created frontend components using jsPDF for exporting HTML reports in PDF formats.

Project 1:

Project name: Maia Virtual Assistant

Client: Group Industrialization & Automation

Duration: June 2018 to Mar 2019

Description: MAIA is QnA conversational virtual assistance that uses NLP with capabilities to smartly identify the intent of the user queries and provides the top 10 relevant solutions.

Role: Backend Developer & Data analyst

Team size: 8

Technology: Java 6, Spring Boot, Spring Data Elasticsearch, Elasticsearch, Kibana, Python

Tools: Eclipse, PyCharm, VS code

Responsibility

- Developed code using Python to crawl through the websites and SharePoint files and fetches the content and metadata, then formatting the extracted data and indexing it in to Elasticsearch.
- Trained the dataset using Python Machine Learning libraries for intent identification and named entity recognition.
- Attending stand-ups and supporting in writing code for web scraping, features enhancements in the Java back end web services and worked in creating/configuring templates for Elasticsearch, data indexing in to the Elasticsearch and created data visualization templates with Kibana.
- From understanding of the Google BERT model to fine tuning it with the SQUAD 2.0 dataset to creating a use case that was able to answer the questions from any new paragraph fed into it.
- Understood the working principles of Amazon comprehend and BRAT tool. Created a use case that was able to identify the intent of any new user query and extract the entities from it.
- Created a NPM library to set up and run Microsoft bot framework quickly with Bing Map, Open street map, Google Map and Map box.

Internship/Training

JSpiders - Java Training Institute — Murgesh Palya, Bangalore, IN

Trained in Java, J2EE (Servlets, EJB, JSP & JDBC), Spring, Hibernate/JPA, Angular, HTML, CSS & SQL (Oracle 11g).
Completed final project using Spring, Oracle 11g and Angular stack.

Education

Government College of Engineering Kalahandi — **2012-16**

B. Tech
